

Rubber Interlaboratory Testing Program

Summary Report #212- 2nd Qtr 2022

[About the Rubber Program](#), [About CTS](#)

[Key for Web Summary Report](#)

Analysis	Analysis Name	Analysis	Analysis Name
605	Tensile Strength: Precured Rubber Samples	6871	MDR Vulcanization Charac.: Cure Time 90%
606	Ultimate Elongation: Precured Rubber Samples	6872	MDR Vulcanization Charac.: Cure Time 90%
607	Stress at 300% Elongation: Precured Samples	6881	MDR Vulcanization Charac.: Minimum Torque
608	Stress at 100% Elongation: Precured Samples	6882	MDR Vulcanization Charac.: Minimum Torque
620	Hardness (Type A): Precured Rubber Samples	6891	MDR Vulcanization Charac.: Maximum Torque
621	Density: Precured Rubber Samples @ 25C	6892	MDR Vulcanization Charac.: Maximum Torque
625	Hardness (Shore D/Type D)	690	RPA Rheological Properties: Part A - G' at 20Hz
630	Tensile Strength: Participant-Cured Rubber	691	RPA Rheological Properties: Part A - G" at 20Hz
631	Ultimate Elongation: Participant-Cured Samples	695	RPA Rheological Properties: Part B - G' at 1.0Hz
632	Tensile Stress at 300% Elongation: Lab-Cured	696	RPA Rheological Properties: Part B - G" at 1.0Hz
633	Tensile Stress at 100% Elongation: Lab-Cured		
635	Compression Set		
660	Mooney Viscosity (4-minute readings)		
661	Mooney Viscosity (8-minute butyl readings)		
662	Mooney Stress Relaxation: t80		
663	Mooney Stress Relaxation: X30		
664	Mooney Stress Relaxation: Area under curve		
669	ODR Vulcanization Charac.: Cure Time 10%		
670	ODR Vulcanization Charac.: Scorch Time, Ts1		
671	ODR Vulcanization Charac.: Cure Time 50%		
672	ODR Vulcanization Charac.: Cure Time 90%		
673	ODR Vulcanization Charac.: Minimum Torque		
674	ODR Vulcanization Charac.: Maximum Torque		
6841	MDR Vulcanization Charac.: Cure Time 10%		
6842	MDR Vulcanization Charac.: Cure Time 10%		
6851	MDR Vulcanization Charac.: Scorch Time, Ts1		
6852	MDR Vulcanization Charac.: Scorch Time, Ts1		
6861	MDR Vulcanization Charac.: Cure Time 50%		
6862	MDR Vulcanization Charac.: Cure Time 50%		

Note: Laboratory results for MDR Tests 684 through 689 exhibited a significant bimodal distribution for cure time and scorch time properties. This unusual distribution is attributed to sample performance. In order to ensure that published statistics are valid and meaningful, CTS split Tests 684-689 into Tests 68X1 and 68X2 (e.g., 6841 and 6842) to separate the two groups of data.

ABOUT THE PROGRAM

The Collaborative Reference Program for RUBBER, which was initiated in 1969, is operated and maintained by Collaborative Testing Services, Inc. (CTS), with technical guidance provided by the Rubber Division of the American Chemical Society. The program allows laboratories to compare periodically the level and uniformity of their testing with that of other participating laboratories. It also provides a realistic assessment of the state of rubber testing proficiency.

For each test there are summary statistics and a graphical representation of the data. Also shown are notes concerning specific laboratory results, as well as significant findings related to instrument types or other testing variations. Please refer to the section KEY TO TABLES AND GRAPHS for an explanation of terms and guidelines to interpreting the results.

ABOUT CTS

Founded in 1971, CTS is a privately-owned company that specializes in interlaboratory tests for a wide variety of industrial sectors, including rubber, plastics, fasteners and metals, containerboard, paper and color, as well as proficiency tests for forensic laboratories. All of the tests are designed to assist organizations in achieving and maintaining quality control objectives. Labs from the U.S., as well as more than 80 countries, currently participate in CTS programs.

If there are any questions on the report or testing program, please contact:

**Collaborative Testing Services, Inc.

Office Hours: 8:00 a.m. - 4:30 p.m. ET

Key for Web Summary Report (Page 1 of 2)

WebCode	Assigned laboratory identification number (temporary) used to ensure lab confidentiality while permitting a lab to locate its data in the Rubber Report published on the CTS Web site. The WebCode for each analysis can be found in the Performance Analysis Report mailed to each participant.
Lab Mean	Tensile & Hardness: the average of the median values obtained for each sample. All other tests: the average of the test results obtained by the participant.
Grand Mean	The average of the LAB MEANS for all included participants. Laboratories flagged with an X or an M (see DATA FLAG column) are excluded from the GRAND MEAN.
Difference from Grand Mean	The difference of the LAB MEAN from the GRAND MEAN.
Between-Lab Standard Deviation	An indication of the precision of measurement between the laboratories. The greater the spread of the LAB MEANS about the GRAND MEAN, the larger the BETWEEN-LAB STANDARD DEVIATION (and vice versa).
Comparative Performance Value	An indication of how well a laboratory's results agree with the other participants. The CPV is a ratio indicating the number of standard deviations from the GRAND MEAN. The closer a laboratory's COMPARATIVE PERFORMANCE VALUE is to zero, the more consistent its results are with the other participants' data (and vice versa). The critical value for each CPV will vary depending on the number of labs participating in a test.
Inst Code	If instruments are tracked in a test, a code indicating the manufacturer of the instrument used to perform the test (see separate INSTRUMENT CODE LIST for each test section).
Data Flag	DATA FLAGS are assigned based on the simultaneous analysis of both samples tested. Refer to the following chart for an explanation of each symbol:

<u>DATA FLAG</u>	<u>STATISTICALLY INCLUDED/EXCLUDED</u>	<u>ACTION REQUIRED</u>
*	INCLUDED	CAUTION - review testing procedure and monitor future results. Results fall outside 95% ellipse but within a 99% ellipse that is calculated but not drawn.
X	EXCLUDED	STOP - immediate review of data and/or testing procedure is required. Results fall outside the 99% ellipse. See specific notes following each table for more information on why the data is excluded.
M	EXCLUDED	PROCEED - lab was unable to report data for at least one sample. However, a lab receiving two or more M flags for a test may need to stop and review its testing procedures.

Graph - For each laboratory, the LAB MEAN for the first sample (x-axis) is plotted against the LAB MEAN for the second sample (y-axis) with each point representing a laboratory. The horizontal and vertical cross-hairs are the GRAND MEANS for each sample. When 20 or more laboratories are in the statistics, an ellipse is also drawn so that 95% of the time a randomly selected laboratory will be included inside the ellipse. Plotted data flags are explained above.

Common Problems Highlighted in Footnotes

1. **Extreme data** - The laboratory's results for one or both samples are so inconsistent with those of the other participants that the lab mean(s) fall outside the plot. (The data usually vary by more than three standard deviations from the grand mean.) The participant is advised to immediately review his data and/or testing procedure.
 2. **Systematic bias** - The laboratory's results are either consistently high or low for both samples when compared to the other participants (the plotted point falls near the top or bottom of the ellipse). This indicates that the participant is performing the test with a constant bias. Causes of systematic errors include improper calibration, the particular make/model of equipment or a modification to the testing procedure.
 3. **Inconsistency in testing between samples/sample sets** - The laboratory's results indicate that there are differences in the way the two samples tested (the plotted point falls to the side of the ellipse). This type of error may be attributed to the analyst deviating from the procedure when testing one of the samples or a material interaction occurrence with the instrument or room conditions. The inconsistency is reflected in the CPVs for the two samples, such as a +1.5 CPV for sample A and a -2.2 CPV for sample B. CTS also will specify if the laboratory's data for one sample are high/low compared to the other participants. If this inconsistency is slight, the lab's plotted point will be an * that falls on the edge of the ellipse.
 4. **Inconsistency in testing within a sample** - The laboratory's within-lab standard deviation for a specified sample is high when compared to the other participants, often causing the lab's plotted point to fall outside of the ellipse.
 5. **Data appeared to be off by a factor of # and was corrected by CTS** - In tests that involve computations, the results reported to CTS may be off by a factor. If this factor can easily be determined, CTS may correct the data and flag the participant. Occasionally CTS will correct a laboratory's results even though the data are still high or low when compared to the other participants. This is done so that the laboratory may be alerted to other possible errors in its testing procedure.
 6. **Data for two samples (or two tests) appeared to be switched by the lab, and the error was corrected by CTS.**
-

Labs flagged with an * are not typically included in the footnotes of a data table. These labs may locate their position in the control ellipse and use the definitions above to help identify the type of testing error. An * should serve as a caution flag, a "yellow light", to a lab. If this error is repeated in future rounds, a lab may need to stop and review its testing procedures. The initial data flag is not cause for alarm. Interlaboratory tests conducted at regular intervals permit a lab to recognize trends in testing.

Comments on Assigned Data Flags for Test #605

FNRKKD (X) - Data for all samples are low. Inconsistent within the determinations of sample group B21-B22.

QVDYVM (X) - Data for all samples are low.

R863HD (X) - Data for sample group B23-B24 are low.

YPG6DD (X) - Data for all samples are high.

Analysis 6841

Report #212

2nd Qtr 2022

MDR Vulcanization-Cure Time 10% (minutes)

Laboratory results for X27-X28 samples exhibited a significant bimodal statistical distribution for cure time and scorch time properties. To ensure that published statistics are meaningful, CTS has split Tests 684 through 689 into Tests 68X1 and 68X2 (e.g., 6841 and 6842). Labs are placed in Group 1 or Group 2 depending on which group of data their X27-X28 results correspond with. All warning (*) and exclusion (X) flags are removed for X27-X28 data. Due to our confidence in the quality of samples X25-X26, any flags remaining are attributed to testing the X25-X26 samples.

If you have any questions, please contact CTS.

Analysis 6842

Report #212

2nd Qtr 2022

MDR Vulcanization-Cure Time 10% (minutes)

Laboratory results for X27-X28 samples exhibited a significant bimodal statistical distribution for cure time and scorch time properties. To ensure that published statistics are meaningful, CTS has split Tests 684 through 689 into Tests 68X1 and 68X2 (e.g., 6841 and 6842). Labs are placed in Group 1 or Group 2 depending on which group of data their X27-X28 results correspond with. All warning (*) and exclusion (X) flags are removed for X27-X28 data. Due to our confidence in the quality of samples X25-X26, any flags remaining are attributed to testing the X25-X26 samples.

If you have any questions, please contact CTS.

Rubber Interlaboratory Testing Program

Analysis 6862

Report #212

2nd Qtr 2022

MDR Vulcanization-Cure Time 50% (minutes)

Grand Mean Sample X25-X26 = 5.9009 minutes

Grand Mean Sample X27-X28 = 4.7863 minutes

If fewer than 20 laboratories are included in an analysis, a control ellipse will not be drawn on the two-sample plot.

Rubber Interlaboratory Testing Program

Analysis 6871

Report #212

2nd Qtr 2022

MDR Vulcanization-Cure Time 90% (minutes)

Laboratory results for X27-X28 samples exhibited a significant bimodal statistical distribution for cure time and scorch time properties. To ensure that published statistics are meaningful, CTS has split Tests 684 through 689 into Tests 68X1 and 68X2 (e.g., 6841 and 6842). Labs are placed in Group 1 or Group 2 depending on which group of data their X27-X28 results correspond with. All warning (*) and exclusion (X) flags are removed for X27-X28 data. Due to our confidence in the quality of samples X25-X26, any flags remaining are attributed to testing the X25-X26 samples.

If you have any questions, please contact CTS.

Report #212

2nd Qtr 2022

MDR Vulcanization: Maximum Torque (lbf.in)

Laboratory results for X27-X28 samples exhibited a significant bimodal statistical distribution for cure time and scorch time properties. To ensure that published statistics are meaningful, CTS has split Tests 684 through 689 into Tests 68X1 and 68X2 (e.g., 6841 and 6842). Labs are placed in Group 1 or Group 2 depending on which group of data their X27-X28 results correspond with. All warning (*) and exclusion (X) flags are removed for X27-X28 data. Due to our confidence in the quality of samples X25-X26, any flags remaining are attributed to testing the X25-X26 samples.

If you have any questions, please contact CTS.
