## **ABOUT THE PROGRAM**

The Collaborative Reference Program for RUBBER, which was initiated in 1969, is operated and maintained by Collaborative Testing Services, Inc. (CTS), with technical guidance provided by the Rubber Division of the American Chemical Society. The program allows laboratories to compare periodically the level and uniformity of their testing with that of other participating laboratories. It also provides a realistic assessment of the state of rubber testing proficiency.

For each test there are summary statistics and a graphical representation of the data. Also shown are notes concerning specific laboratory results, as well as significant findings related to instrument types or other testing variations. Please refer to the section KEY TO TABLES AND GRAPHS for an explanation of terms and guidelines to interpreting the results.

## **ABOUT CTS**

Founded in 1971, CTS is a privately-owned company that specializes in interlaboratory tests for a wide variety of industries including rubber, plastics, fasteners and metals, containerboard, paper and color, wine, and hemp, as well as proficiency tests for forensic laboratories. All of the tests are designed to assist organizations in achieving and maintaining quality control objectives. Labs from the U.S., as well as more than 100 countries, currently participate in CTS programs.

If there are any questions on the report or testing program, please contact:

**Collaborative Testing Services, Inc.**  
21331 Gentry Drive  
Sterling, Virginia 20166 USA

## Key for Web Summary Report (Page 1 of 2)

<b>WebCode</b>	Assigned laboratory identification number (temporary) used to ensure lab confidentiality while permitting a lab to locate its data in the Rubber Report published on the CTS Web site. The WebCode for each analysis can be found in the Performance Analysis Report mailed to each participant.
<b>Lab Mean</b>	Tensile & Hardness: the average of the median values obtained for each sample. All other tests: the average of the test results obtained by the participant.
<b>Grand Mean</b>	The average of the LAB MEANS for all included participants. Laboratories flagged with an X or an M (see DATA FLAG column) are excluded from the GRAND MEAN.
<b>Difference from Grand Mean</b>	The difference of the LAB MEAN from the GRAND MEAN.
<b>Between-Lab Standard Deviation</b>	An indication of the precision of measurement between the laboratories. The greater the spread of the LAB MEANS about the GRAND MEAN, the larger the BETWEEN-LAB STANDARD DEVIATION (and vice versa).
<b>Comparative Performance Value</b>	An indication of how well a laboratory's results agree with the other participants. The CPV is a ratio indicating the number of standard deviations from the GRAND MEAN. The closer a laboratory's COMPARATIVE PERFORMANCE VALUE is to zero, the more consistent its results are with the other participants' data (and vice versa). The critical value for each CPV will vary depending on the number of labs participating in a test.
<b>Inst Code</b>	If instruments are tracked in a test, a code indicating the manufacturer of the instrument used to perform the test (see separate INSTRUMENT CODE LIST for each test section).
<b>Data Flag</b>	DATA FLAGS are assigned based on the simultaneous analysis of both samples tested. Refer to the following chart for an explanation of each symbol:

<b><u>DATA FLAG</u></b>	<b><u>STATISTICALLY INCLUDED/EXCLUDED</u></b>	<b><u>ACTION REQUIRED</u></b>
*	INCLUDED	<b>CAUTION</b> - review testing procedure and monitor future results. Results fall outside 95% ellipse but within a 99% ellipse that is calculated but not drawn.
X	EXCLUDED	<b>STOP</b> - immediate review of data and/or testing procedure is required. Results fall outside the 99% ellipse. See specific notes following each table for more information on why the data is excluded.
M	EXCLUDED	<b>PROCEED</b> - lab was unable to report data for at least one sample. However, a lab receiving two or more M flags for a test may need to stop and review its testing procedures.

**Graph** - For each laboratory, the LAB MEAN for the first sample (x-axis) is plotted against the LAB MEAN for the second sample (y-axis) with each point representing a laboratory. The horizontal and vertical cross-hairs are the GRAND MEANS for each sample. When 20 or more laboratories are in the statistics, an ellipse is also drawn so that 95% of the time a randomly selected laboratory will be included inside the ellipse. Plotted data flags are explained above.

---

### Common Problems Highlighted in Footnotes

1. **Extreme data** - The laboratory's results for one or both samples are so inconsistent with those of the other participants that the lab mean(s) fall outside the plot. (The data usually vary by more than three standard deviations from the grand mean.) The participant is advised to immediately review his data and/or testing procedure.
  2. **Systematic bias** - The laboratory's results are either consistently high or low for both samples when compared to the other participants (the plotted point falls near the top or bottom of the ellipse). This indicates that the participant is performing the test with a constant bias. Causes of systematic errors include improper calibration, the particular make/model of equipment or a modification to the testing procedure.
  3. **Inconsistency in testing between samples/sample sets** - The laboratory's results indicate that there are differences in the way the two samples tested (the plotted point falls to the side of the ellipse). This type of error may be attributed to the analyst deviating from the procedure when testing one of the samples or a material interaction occurrence with the instrument or room conditions. The inconsistency is reflected in the CPVs for the two samples, such as a +1.5 CPV for sample A and a -2.2 CPV for sample B. CTS also will specify if the laboratory's data for one sample are high/low compared to the other participants. If this inconsistency is slight, the lab's plotted point will be an \* that falls on the edge of the ellipse.
  4. **Inconsistency in testing within a sample** - The laboratory's within-lab standard deviation for a specified sample is high when compared to the other participants, often causing the lab's plotted point to fall outside of the ellipse.
  5. **Data appeared to be off by a factor of # and was corrected by CTS** - In tests that involve computations, the results reported to CTS may be off by a factor. If this factor can easily be determined, CTS may correct the data and flag the participant. Occasionally CTS will correct a laboratory's results even though the data are still high or low when compared to the other participants. This is done so that the laboratory may be alerted to other possible errors in its testing procedure.
  6. **Data for two samples (or two tests) appeared to be switched by the lab, and the error was corrected by CTS.**
- 

Labs flagged with an \* are not typically included in the footnotes of a data table. These labs may locate their position in the control ellipse and use the definitions above to help identify the type of testing error. An \* should serve as a caution flag, a "yellow light", to a lab. If this error is repeated in future rounds, a lab may need to stop and review its testing procedures. The initial data flag is not cause for alarm. Interlaboratory tests conducted at regular intervals permit a lab to recognize trends in testing.

#### Summary Statistics

##### Grand Means

615.30 percent

628.75 percent

##### Stnd Dev Btwn Labs

25.71 percent

27.49 percent

Statistics based on 81 of 91 reporting participants

Samples C31-C32: Polyisoprene compound, batch #1 & C33-C34: Polyisoprene compound, batch #2

#### Comments on Assigned Data Flags for Test #606

6Y6MGC (X) - Inconsistent in testing between samples. Inconsistent within the determinations of sample group C33-C34.

9FJZHT (X) - Extreme data.

9GH48P (X) - Inconsistent in testing between samples. Inconsistent within the determinations of sample group C31-C32.

F62QY8 (X) - Data for all samples are high. Inconsistent within the determinations of both sample groups.

FQH4UF (X) - Data for all samples are low. Inconsistent within the determinations of both sample groups.

JZGZ69 (X) - Data for sample group C31-C32 are high.

RGV6X8 (X) - Extreme Data.

RXEZGU (X) - Data for all samples are high. Possible Systematic Error.

WYY9PY (X) - Data for all samples are high. Possible Systematic Error.

Y7ABRQ (X) - Extreme data.

## Rubber Interlaboratory Testing Program

### Analysis 607

Report #217

3rd Qtr 2023

#### Stress at 300% Elongation (psi)

---

##### **Comments on Assigned Data Flags for Test #607**

6Y6MGC (X) - Data for sample group C33-C34 are high. Inconsistent within the determinations of sample group C33-C34.

9FJZHT (X) - Data for all samples are low.

DBB7RD (X) - Data for sample group C33-C34 are high.

F62QY8 (X) - Data for sample group C33-C34 are high. Inconsistent within the determinations of sample group C31-C32.

L89ZQE (X) - Data for sample group C31-C32 are low.

P7KXC2 (X) - Data for all samples are high.

RGV6X8 (X) - Extreme Data.

RXEZGU (X) - Data for all samples are low.

WYY9PY (X) - Data for all samples are low.

XAUTTQ (X) - Data for all samples are high.

## Rubber Interlaboratory Testing Program

### Analysis 661

Report #217

3rd Qtr 2023

#### Mooney Viscosity: 4-min NBR/SBR & 8-min butyl readings (ML)

Samples U31-U32: NBR & U33-U34: Butyl

##### **Comments on Assigned Data Flags for Test #661**

CFVTTD (X) - Data for all samples are low. Inconsistent within the determinations of sample group U31-U32.

DAYRVJ (X) - Data for all Samples are low.

##### **Key to Instrument Codes Reported by Participants**
