About the Wine Industry Interlaboratory Program

This interlaboratory survey was administered by Collaborative Testing Services, Inc. (CTS) through an agreement with The American Society for Enology and Viticulture (ASEV) with technical assistance provided by the Laboratory Proficiency Ad Hoc Committee. The purpose of the survey was to evaluate laboratory performance and assess the performance of the industry with respect to quality assurance testing conducted on commercially produced wine through an on-going interlaboratory testing program. Two bottles of differing wines were supplied to participant laboratories. The samples for each type of wine were chosen consecutively from a single production run, to minimize variation between bottles. Participating laboratories were asked to analyze the samples' ten properties in accordance with their normal laboratory procedures and return the results and methodology information to CTS.

About CTS

Founded in 1971, Collaborative Testing Services, Inc. (CTS) is a privately - owned company that specializes in interlaboratory tests for a variety of sectors: including rubber, plastics, fasteners and metals, containerboard, paper, wine and color, as well as proficiency tests for forensic laboratories. All of the tests are designed to assist organizations in achieving and maintaining quality assurance objectives. Labs from the U.S., as well as more than 80 countries, currently participate in the CTS programs.

Key for Web Summary Report (Page 1 of 2)

WebCode	Assigned laboratory identification number (temporary) used to ensure lab confidentiality while permitting a lab to locate its data in the Wine Web Summary Report published on the CTS web site. The WebCode for each analysis can be found in the Performance Analysis Report mailed to each participant.
Lab Mean	The average of the test results obtained by the participant.
Grand Mean	The average of the LAB MEANS for all included participants. Laboratories flagged with an X or an M (see DATA FLAG column) are excluded from the GRAND MEAN.
Difference from Grand Mean	The difference of the LAB MEAN from the GRAND MEAN.
Between-Lab Standard Deviation	An indication of the precision of measurement between the laboratories. The greater the spread of the LAB MEANS about the GRAND MEAN, the larger the BETWEEN-LAB STANDARD DEVIATION (and vice versa).
Comparative Performance Value	An indication of how well a laboratory's results agree with the other participants. The CPV is a ratio indicating the number of standard deviations from the GRAND MEAN. The closer a laboratory's COMPARATIVE PERFORMANCE VALUE is to zero, the more consistent its results are with the other participants' data (and vice versa). The critical value for each CPV will vary depending on the number of labs participating in a test.
Data Flag	DATA FLAGS are assigned based on the simultaneous analysis of both samples tested. Refer to the following chart for an explanation of each symbol:

<u>DATA FLAG</u>	<u>STATISTICALLY INCLUDED/EXCLUDED</u>	<u>ACTION REQUIRED</u>
*	INCLUDED	CAUTION - review testing procedure and monitor future results. Results fall outside 95% ellipse but within a 99% ellipse that is calculated but not drawn.
X	EXCLUDED	STOP - immediate review of data and/or testing procedure is required. Results fall outside the 99% ellipse. See specific notes following each table for more information on why the data is excluded.
M	EXCLUDED	PROCEED - lab was unable to report data for one sample.

Graph - For each laboratory, the LAB MEAN for the first sample (x-axis) is plotted against the LAB MEAN for the second sample (y-axis) with each point representing a laboratory. The horizontal and vertical cross-hairs are the GRAND MEANS for each sample. When 20 or more laboratories are in the statistics, an ellipse is also drawn so that 95% of the time a randomly selected laboratory will be included inside the ellipse. Plotted data flags are explained above.

Common Problems Highlighted in Footnotes

1. ***Extreme data*** - The laboratory's results for one or both samples are so inconsistent with those of the other participants that the lab mean(s) fall outside the plot. The participant is advised to immediately review his data and/or testing procedure.
2. ***Systematic bias*** - The laboratory's results are either consistently high or low for both samples when compared to the other participants (the plotted point falls near the top or bottom of the ellipse). This indicates that the participant is performing the test with a constant bias. Causes of systematic errors include improper calibration, the particular make/model of equipment or a modification to the testing procedure.
3. ***Inconsistency in testing between samples/sample sets*** - The laboratory's results indicate that there are differences in the way the two samples tested (the plotted point falls to the side of the ellipse). This type of error may be attributed to the analyst deviating from the procedure when testing one of the samples or a material interaction occurrence with the instrument or room conditions. The inconsistency is reflected in the CPVs for the two samples, such as a +1.5 CPV for sample A and a -2.2 CPV for sample B. CTS also will specify if the laboratory's data for one sample are high/low compared to the other participants. If this inconsistency is slight, the lab's plotted point will be an * that falls on the edge of the ellipse.
4. ***Inconsistency in testing within a sample*** - The laboratory's within-lab standard deviation for a specified sample is high when compared to the other participants, often causing the lab's plotted point to fall outside of the ellipse.

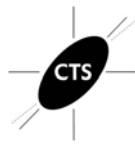

Labs flagged with an * are not typically included in the footnotes of a data table. These labs may locate their position in the control ellipse and use the definitions above to help identify the type of testing error. An * should serve as a caution flag, a "yellow light", to a lab. If this error is repeated in future rounds, a lab may need to stop and review its testing procedures. The initial data flag is not cause for alarm. Interlaboratory tests conducted at regular intervals permit a lab to recognize trends in testing.

Comments on Assigned Data Flags for Test #901

XZU64X (X) - Data for both samples are high. Possible Systematic Error.

MU2L97 (X) - Inconsistent in testing between samples. Inconsistent within the determinations of sample SA17.

FNLBHX (X) - Inconsistent in Testing. Data for sample SA17 are high.

TCMVYN (X) - Inconsistent in Testing. Data for sample SA18 are low.

EEGAXY (X) - Data for both samples are low. Possible Systematic Error. Inconsistent within the determinations of both samples.

CGRB7Z (X) - Data for both samples are low. Possible Systematic Error.

Comments on Assigned Data Flags for Test #904

DBJ3MB (X) - Inconsistent in testing between samples.

XZU64X (X) - Data for both samples are high.

AWVNVL (X) - Data for both samples are low. Possible Systematic Error.

FWDNEC (X) - Data for sample SA18 are low.

XJACGF (X) - Data for both samples are high. Possible Systematic Error.

CMK7EZ (X) - Data for both samples are high. Possible Systematic Error.

QUTKRN (X) - Inconsistent in Testing. Data for sample SA17 are low.

EEGAXY (X) - Inconsistent in testing between samples. Inconsistent within the determinations of sample SA18.

78HT7F (X) - Data for both samples are low. Possible Systematic Error.

ENZJK8 (X) - Inconsistent in Testing. Data for sample SA18 are low.

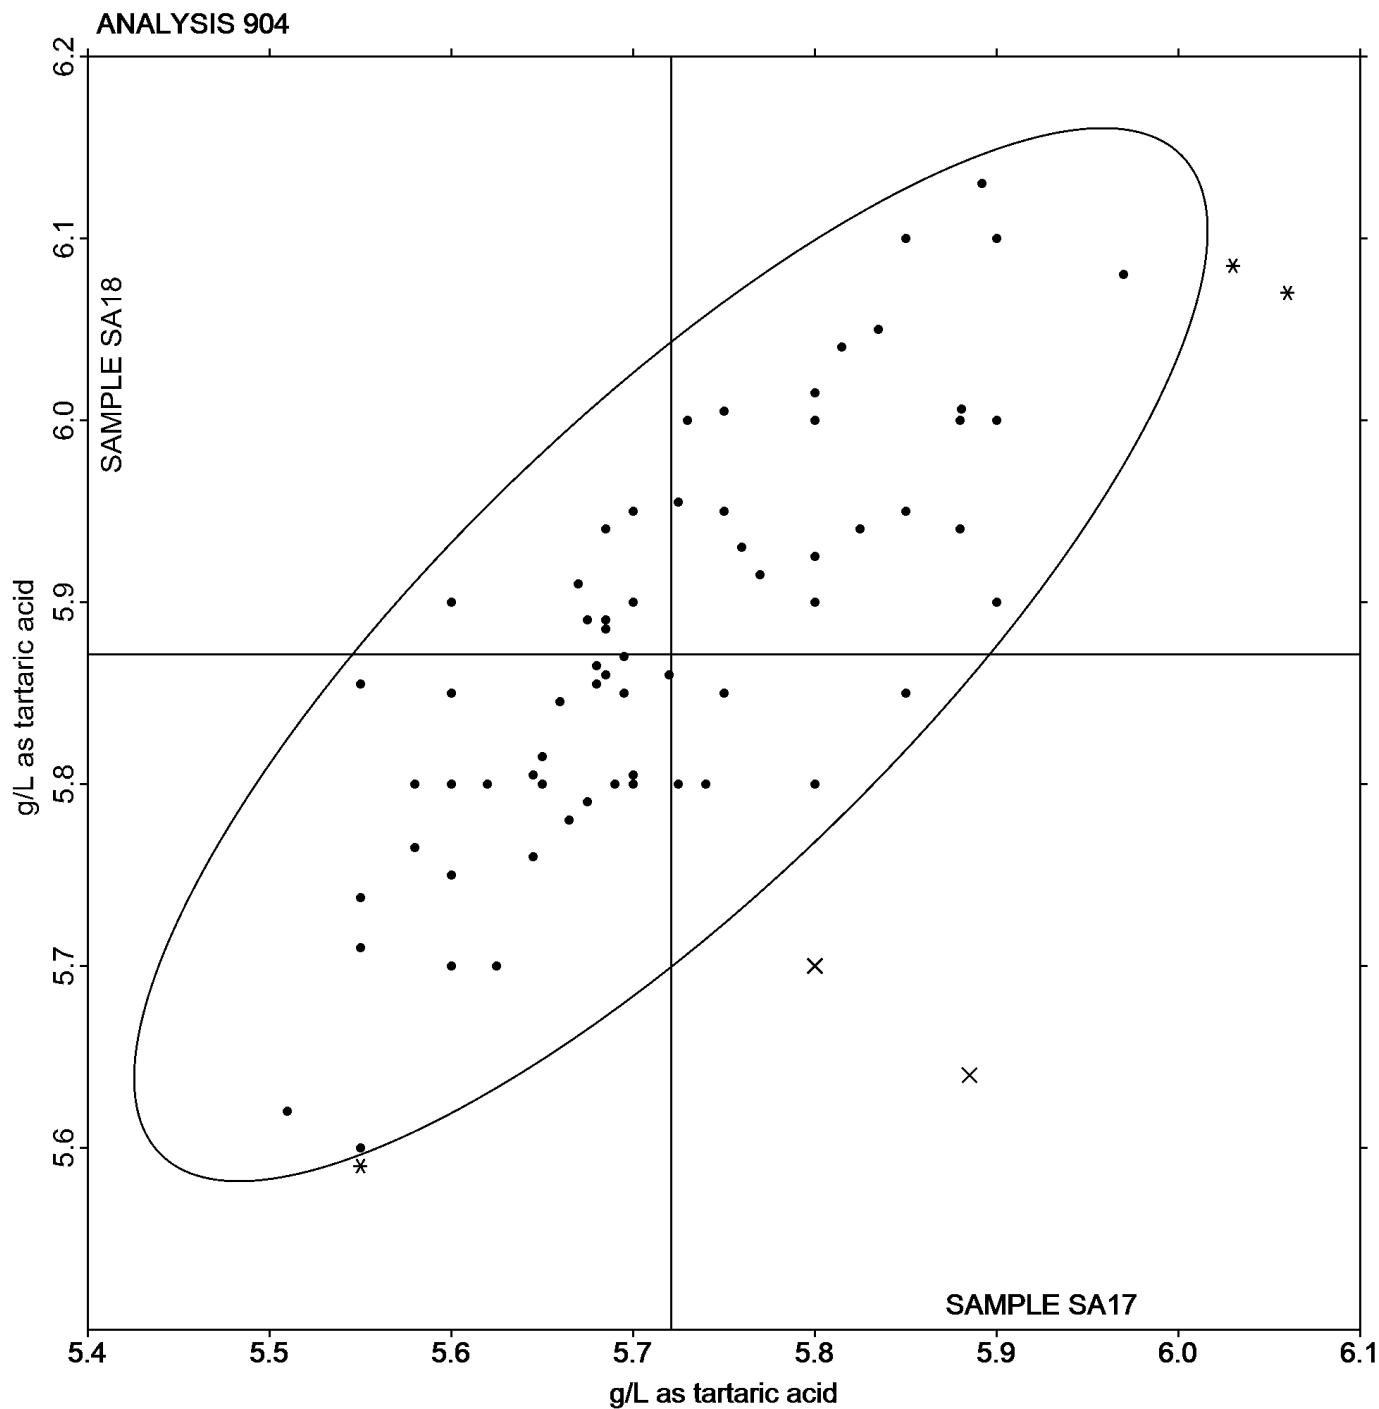

ZTMHVG (X) - Inconsistent in Testing. Data for sample SA18 are high.

K34YAH (X) - Data for both samples are high. Possible Systematic Error.

EZG9KX (X) - Inconsistent in Testing. Data for sample SA18 are high.

Comments on Assigned Data Flags for Test #907

JH3GQH (X) - Inconsistent in testing between samples.

279A4N (X) - Inconsistent in Testing. Data for sample SA17 are low.

Y6JYFP (X) - Inconsistent in testing between samples.

DBJ3MB (X) - Data for sample SA17 are high and data for sample SA18 are low. Lab may have transposed data between samples.

UCHVCT (X) - Data for both samples are high. Possible Systematic Error.

FWDNEC (X) - Data for both samples are high. Possible Systematic Error.

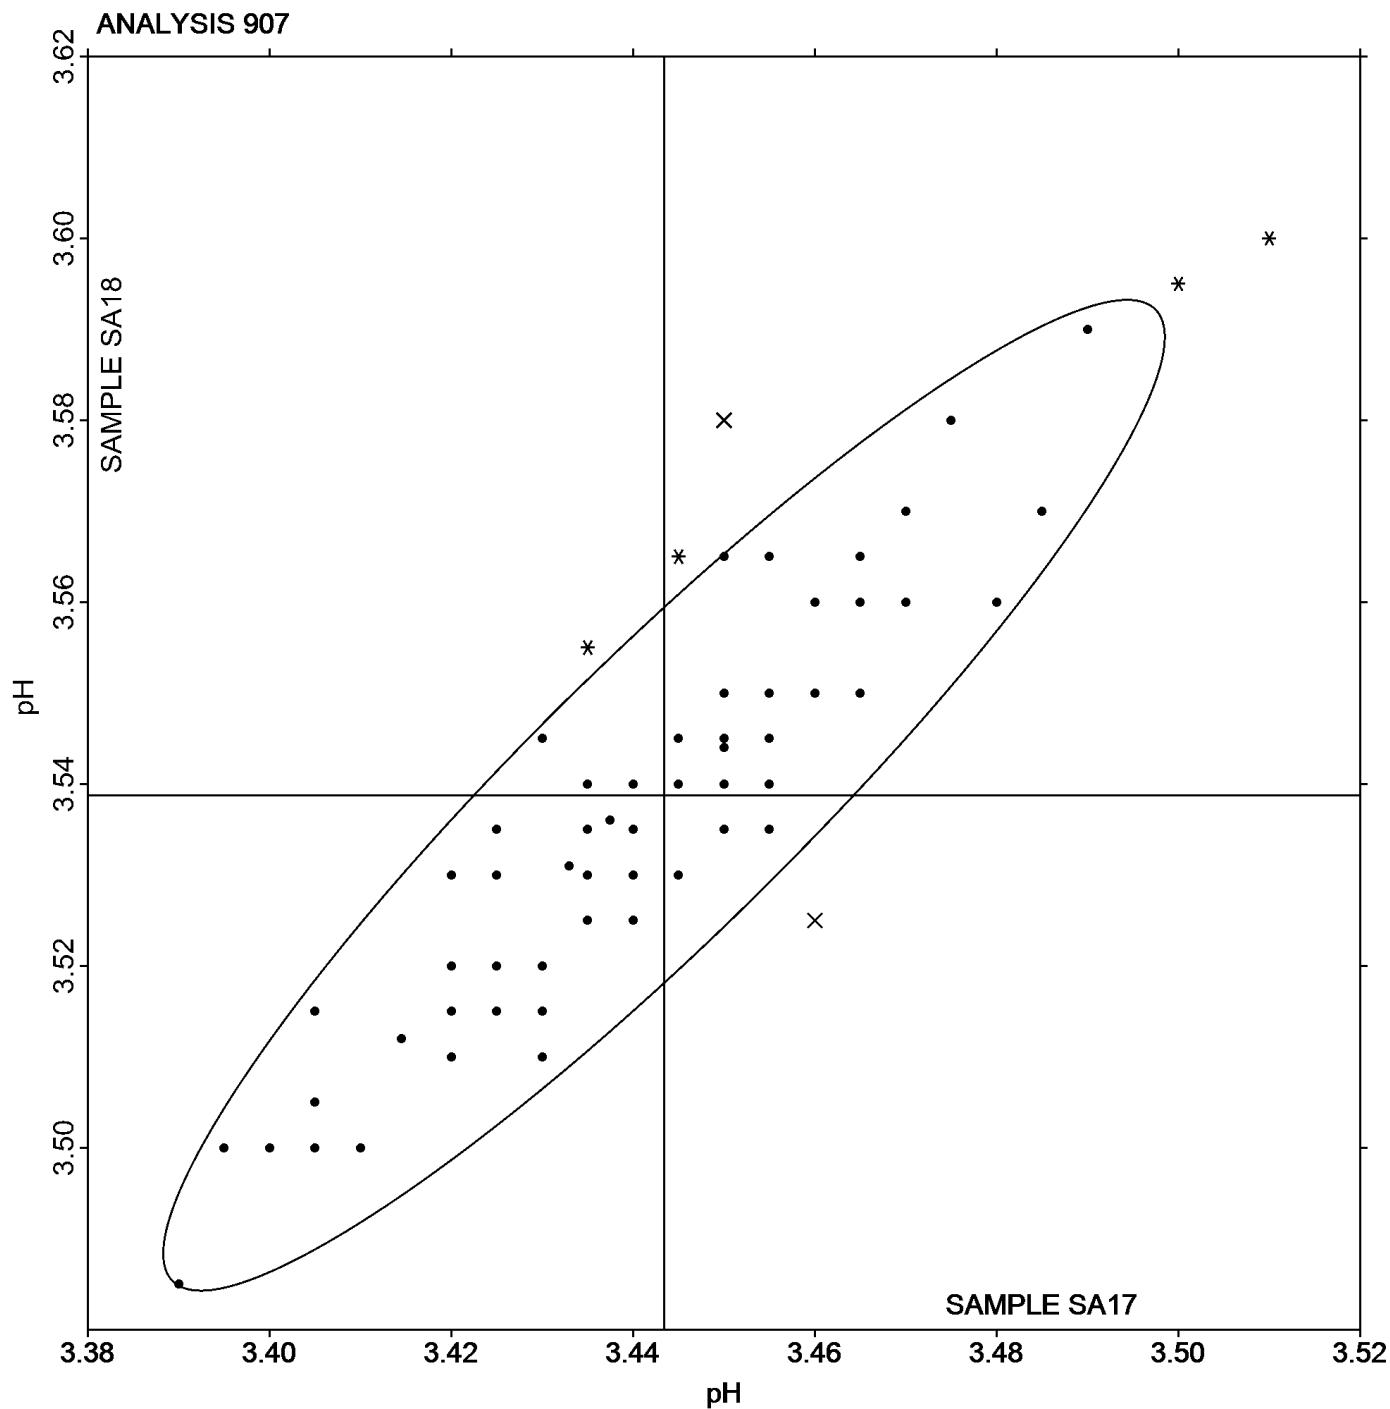

TCMVYN (X) - Inconsistent in Testing. Data for sample SA17 are low.

GBRH2 (X) - Data for both samples are low. Possible Systematic Error.

E8GQXN (X) - Data for both samples are high. Possible Systematic Error.

**Analysis 952****Research Property: Turbidity****Research Property Consensus Value**

Consensus Average

0.30205 NTU

0.27563 NTU

Note: Tests 950, 951 and 952, are research tests. As a result participants should use caution when evaluating data for these tests.

Wines tested: SA17: Malbec; SA18: Merlot

This consensus average is based on 67 reporting participants.

Comments on Assigned Data Flags for Test #952

GT9GDC (X) - Data for sample SA18 are high.

LWVQQT (M) - Participant did not submit data for sample SA18.

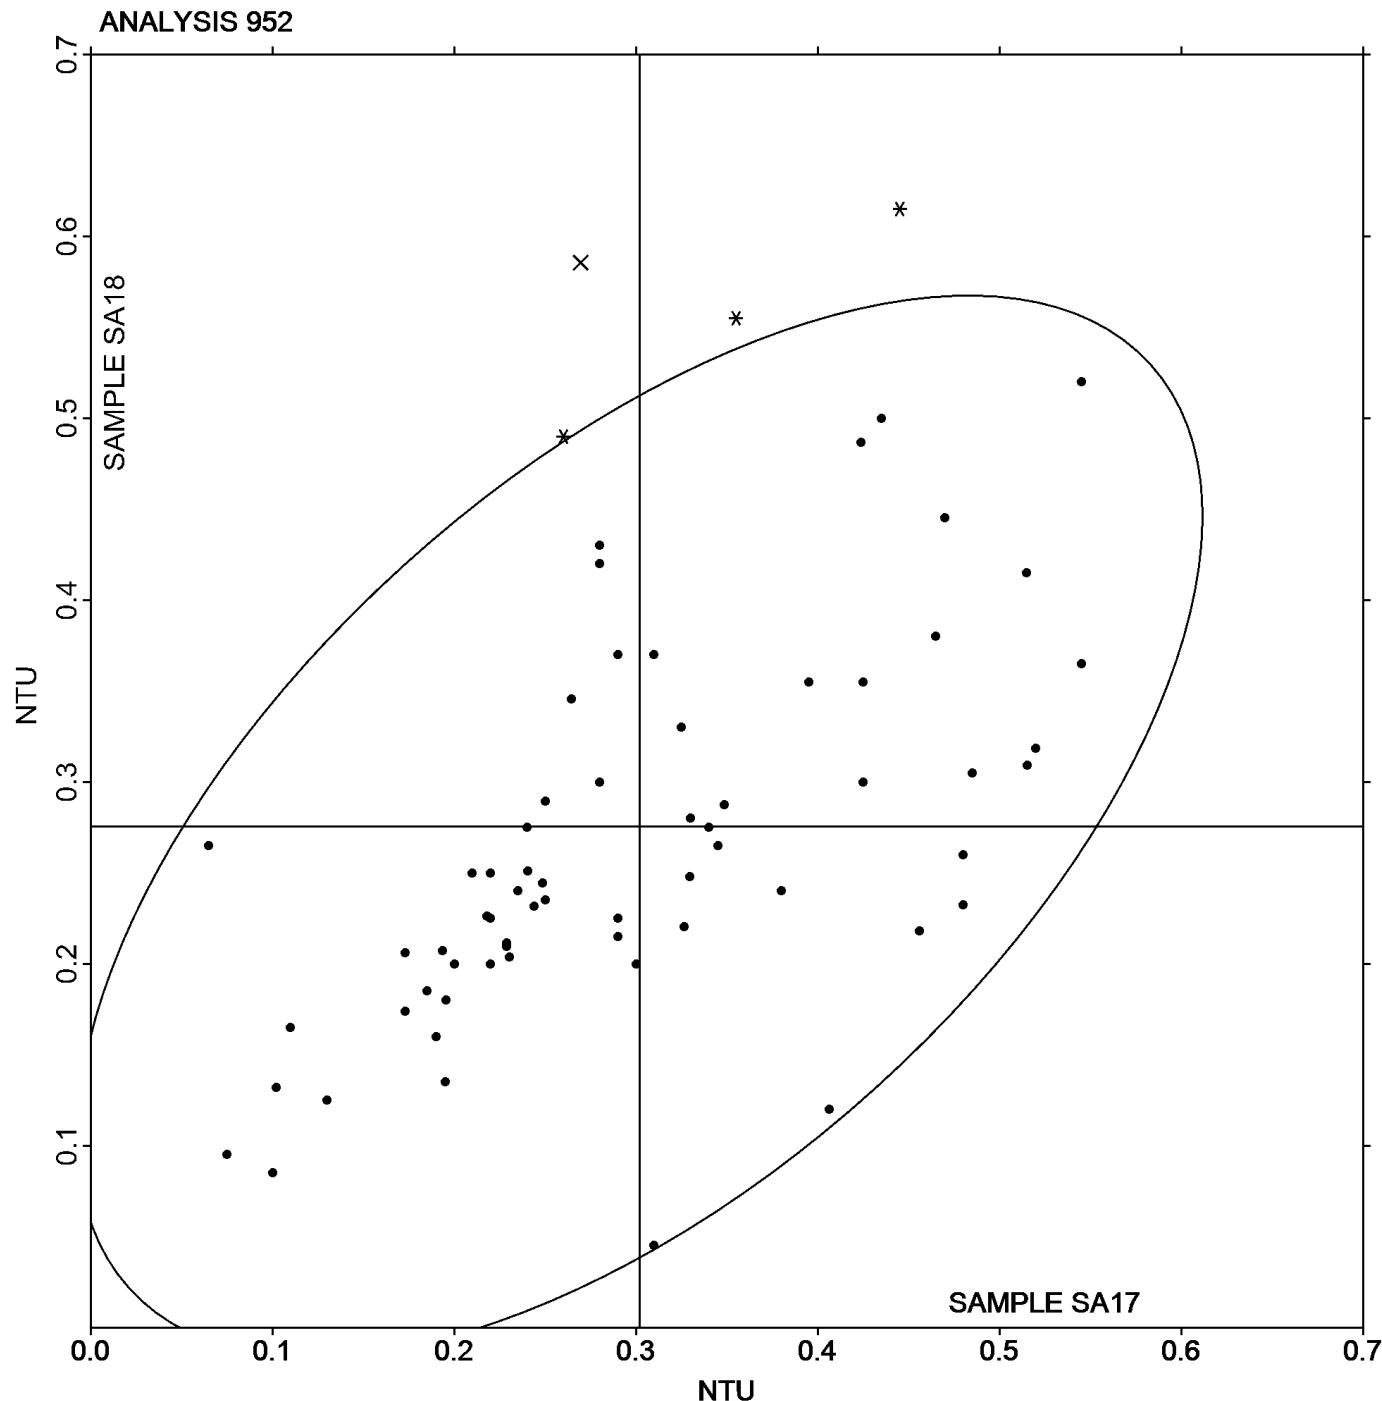

7X3WBA (X) - Data for both samples are high. Inconsistent within the determinations of sample SA17.

ZGAZNK (X) - Inconsistent in testing between samples. Inconsistent within the determinations of sample SA18.

JAQ6UK (X) - Data for both samples are high.
